DEEPANSHU SHARMA

Delhi, India deepanshu190920005@gmail.com +919821746617 in/deepanshu-sharma-3594a6319 myportfolio-ten-iota.vercel.app/

SUMMARY

Full-stack engineer skilled in the MERN stack, Docker, and AWS, with hands-on experience in real-time systems and LLM/AI integration. Final-year B.Tech CSE (CGPA 9.36), GATE 2026 qualified.

EXPERIENCE

Full-Stack Developer

Sharnex **July 2026 - Present, Delhi**

- Designed a multi-tier inventory and warehouse management module (Central → Site → Sub-store) for a construction ERP, supporting real-time stock tracking via an append-only, partitioned PostgreSQL ledger.
- Built a multi-level indent approval workflow with automatic value-based routing (Site Engineer → Project Manager → Owner), enforcing role-based access control (RBAC) across 5 distinct user roles and approval thresholds.
- Implemented FIFO and Weighted-Average inventory valuation engines, GRN/QC processing with partial-acceptance handling, and automated MOQ-based purchase alerts via scheduled system checks.
- Architected a secure, invite-only onboarding flow with server-driven role assignment and routing, eliminating client-side role selection to prevent privilege escalation.

PROJECT

CodeFlux - Real-Time AI Collaborative IDE with Automated Deployment

April 2026 - Present

- Built a real-time collaborative IDE using WebSockets/Operational Transformation (OT), enabling multiple developers to edit and synchronize code simultaneously with conflict-free updates.
- Architected Docker-based sandboxed code execution environments, isolating each user's runtime for secure, independent program execution across multiple languages; extended this to a real-time interactive terminal for live command execution within containers.
- Integrated LLM-powered coding assistance (code generation, debugging, and inline suggestions) via [OpenAI/Anthropic] API to boost developer productivity.
- Engineered one-click CI/CD deployment pipeline, allowing users to deploy projects directly from the IDE with minimal configuration.

U&me - Multilingual Real-Time Chat App

u-me-chat-app.vercel.app/ • May 2025 - August 2025

- Engineered a real-time messaging application using WebSockets, integrating automatic language detection and translation APIs to enable seamless cross-language communication for users.
- Deployed and maintained a production-grade Node.js/MongoDB backend serving 20+ active users with 99%+ uptime; optimized MongoDB queries and indexing to reduce message delivery latency to under 100ms.
- Built secure user authentication (JWT/OAuth), persistent message storage, and a responsive, mobile-first UI using React and Tailwind CSS.

EDUCATION

B. Tech in Computer Science

Guru Gobind Singh Indraprastha University • Delhi • 2027

- CGPA: 9.36 / 10 | Coursework: DSA, OS, DBMS.

Senior Secondary Education

Government Sarvodaya Bal Vidyalaya • Delhi • 2023

- PCMB 84.4%

AWARDS & HONORS

Gate (CSE) 2026 Qualified

Indian Institute of Technology (Guwahati) • 2026

SKILLS

Frontend & Backend - React.js, HTML5, CSS3, JavaScript (ES6+), Node.js, Express.js, REST APIs, Socket.IO, JWT Authentication

AI/ML & Tools — Claude API, Ollama, GitHub Copilot, AI-assisted development, Git, GitHub, VS Code, Postman

Database & Cloud — Docker, AWS (EC2, S3, CloudFront), Vercel, Render, MongoDB

Languages - JavaScript, C, C++, Java
